

TTP226 TonTouchTM

8 KEYS TOUCH PAD DETECTOR IC

GENERAL DESCRIPTION

The TTP226 TonTouchTM is a touch pad detector IC which offers 8 touch keys. The touching detection IC is designed for replacing traditional direct button key with fixed pad size. Low power consumption and wide operating voltage are the contact key features for DC or AC application.

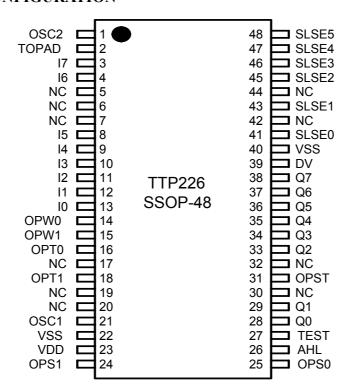

FEATURES

- Operating voltage 2.0V~5.5V
- Operating current typical 100uA, max 160uA at VDD=3V
- The output refresh rate about 55Hz at VDD=3V
- 64 steps sensitivity selectable (SLSE0~5 pin option) Another have offer 2 kinds of base-step (OPST pin option)
- Stable touching detection of human body for replacing traditional direct switch key
- Provides direct mode
 natrix mode and serial mode selected by pad option
- Maximum 8 input pads and 8 outputs for direct mode;
 Maximum 8 input pads for serial interface mode;
 Maximum 8 input pads provide fixed 2*4 and 3*3 matrix types
- Outputs can be selected active high or active low by pad option
- After power-on have 0.8~1.0sec stable-time, during the time do not touch the key-pad, And the function is disabled.
- Auto calibration for life. And the re-calibration period is 0.8~1.0sec. When all keys do not touched.

APPLICATION

- Wide consumer products
- Button key replacement

TTP226 TonTouchTM

FUNCTION DESCRIPTION

1. System timing control

> Input detection sensitivity reserved 6 pin option 64 steps

Features	Characteristic	Example
System clock	OSC1	440KHz at 3V
Output refresh rate	<= OSC1/1024/8	~55Hz
DV active pulse width	<= OSC1/8	~55KHz

2. System initial signal

System initial or mode initial		
State Function		
Power on reset	System reset to initial state	
RST=1	Serial mode shift counter reset	

3. Interrupt

For MCU system, the interrupt request is useful for software programming. The DV signal offer the considerate output control. The DV is active high or active low optioned by AHL pin. Any active input can pass the de-bounce procedure will active the DV signal.

For different application, some output needs active high and others need active low. The AHL pin can offers the optional feature.

AHL pin option	Active output state
	De-bounce Ii trigger the Qi
AHL=0	DV=0
	Qi=0
	De-bounce Ii trigger the Qi
AHL=1	DV=1
	Qi=1

AHL	Input Ii	Output Qi or DV
0	Non-active	1
	Active	0
1	Non-active	0
	Active	1

TTP226 TonTouchTM

4. Output mode

Most output modes will operate at direct or serial mode. Only when OPS0=0, the output mode will work as matrix type.

Output type option				
OPS1 OPS0 Output type Remark				
1	1 Direct type Qi ← de-bounce Ii			
0	1	Serial type Use CK & RST & DO serial out the de-bounce key		
1	1 0 Matrix type Matrix 3*3 fixed type			
0	0	Matrix type	Matrix 2*4 fixed type	

a. Direct mode: OPS1=1 & OPS0=1

Direct mode	Output state	
Input trigger	De-bounce Ii trigger the Qi	

b. Key matrix mode: OPS1=X & OPS0=0

b-1: 2*4 key map (By OPS1=0)

Matrix	SCN2	SCN3	SCN4	SCN5
SCN0	10	I2	I4	I6
SCN1	I1	I3	I5	I7

b-2: 3*3 key map (By OPS1=1)

Matrix	SCN3	SCN4	SCN5
SCN0	10	I3	I6
SCN1	I1	I4	I7
SCN2	I2	I 5	-

c. Serial mode: OPS1=0 & OPS0=1

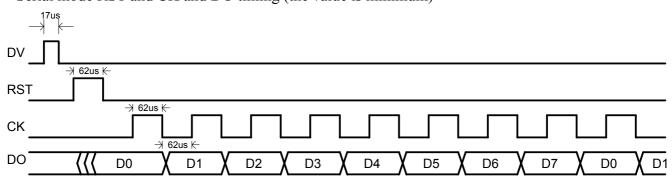

Serial mod	Serial mode procedure (OPS1=0)				
RESET & CLOCK	Shifter counter	DO			
RST =1	0	De-bounce I0			
1 st CK	1	De-bounce I1			
2 nd CK	2	De-bounce I2			
3 rd CK	3	De-bounce I3			
4 th CK	4	De-bounce I4			
5 th CK	5	De-bounce I5			
6 th CK	6	De-bounce I6			
7 th CK	7	De-bounce I7			
8 th CK	0	De-bounce I0			
9 th CK	1	De-bounce I1			

TTP226 TonTouchTM

Serial mode RST and CK and DO timing (the value is minimum)

5. Key on duration time

OPT1	OPT0	On duration time
1	1	Infinite(disable Key-on-time)
1	0	10 seconds to reset system
0	1	30 seconds to reset system
0	0	60 seconds to reset system

When enable key-on-time, any key of the I0~I7 keys has been detected, it will start the key-on-time counter until releasing key-touch. And for the duration has another key to be detected, the key-on-time counter will be re-counting.

6. Sensitivity select and Base-step select and Windows of sensitivity select

a. The windows of sensitivity select by OPW0 & OPW1 pins. When the windows of sensitivity is selected, and the key has detected, the condition for detecting different number will change from primitive setting numbers to smaller. So the doing will make the key touch detecting stably.

OPW1	OPW0	Windows selecting		
1	1	No-windows		
1	0	1/2-windows		
0	1	1/4-windows		
0	0	1/8-windows		

b. The selecting base-step of sensitivity

OPST	Base-step		
1	1-step(1 sensor-clock)		
0	2-step(2 sensor-clock)		

c. Sensitivity selecting

The key detecting condition is the value (different clock numbers) of No-windows for detecting from no-touching to touching. When the key has been detected, the condition of key detecting and releasing will change to the value of selecting windows for the windows enabling.

$\begin{array}{c} TTP226 \\ TonTouch \\ \end{array}$

7. Option pin

For power saving concern and package bonding option consideration, all the feature option pin with latch type design and initialized as 1 as power on. If those pins are forced to VSS, the states will be changed to 0 without any current leakage to conflict the power saving issue.

Feature option pins	Initial state by Power on
OPW0	1
OPW1	1

APPLICATION CIRCUIT

a. For direct mode

APPLICATION FOR DIRECT KEY OUTPUT MODE

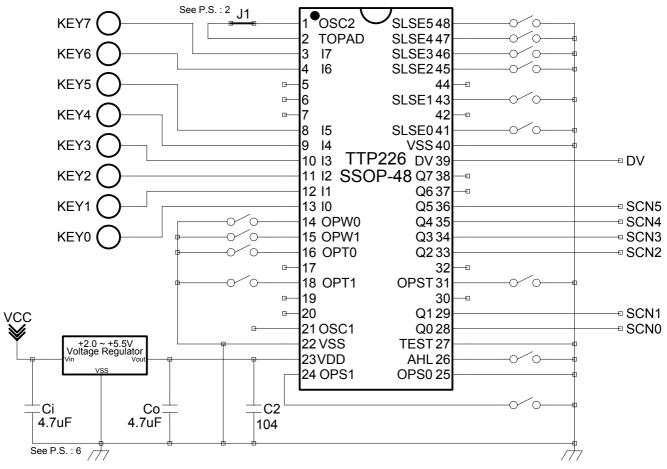

- P.S.: 1. On PCB, the length of lines from touch pad to IC pins are best the same with K0 to K7. And the lines do not parallel and cross with other lines.
 - 2. When the application use larger touch pad, recommend to use capacitor on the place of J1. That can improve the stability. And the value of capacitor can be used by the real application. Other application can be short on the place of J1.
 - 3. The power supply must be stable. If the supply voltage drift or shift quickly, maybe causing sensitivity anomalies or false detections.
 - 4. The material of panel covering on the PCB can not include the metal or the electric element. The paints on the surfaces are the same.
 - 5. The C2 capacitor must be used between VDD and VSS; and should be routed with very short tracks to the device's VDD and VSS pins (TTP226).
 - 6. The value of capacitors can be used by the real application for Ci and Co capacitors.

TTP226 TonTouchTM

b. For matrix key mode

APPLICATION FOR MATRIX KEY OUTPUT MODE

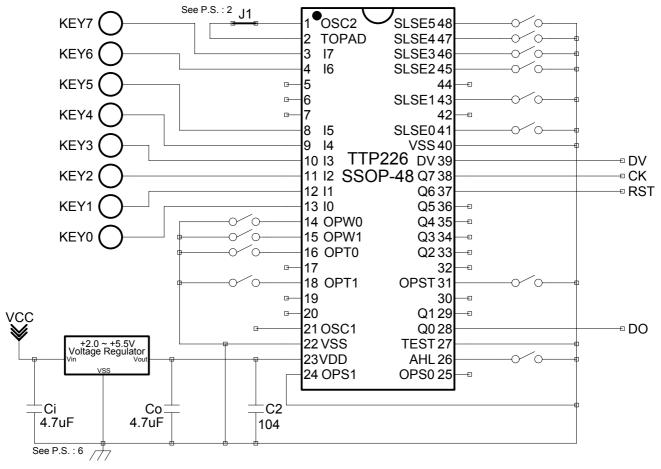

- P.S.: 1. On PCB, the length of lines from touch pad to IC pins are best the same with K0 to K7. And the lines do not parallel and cross with other lines.
